

Engineering Software License Management Services

A portfolio of services for comprehensive software license management

MAXIMIZE THE ROI OF YOUR CAx LICENSES

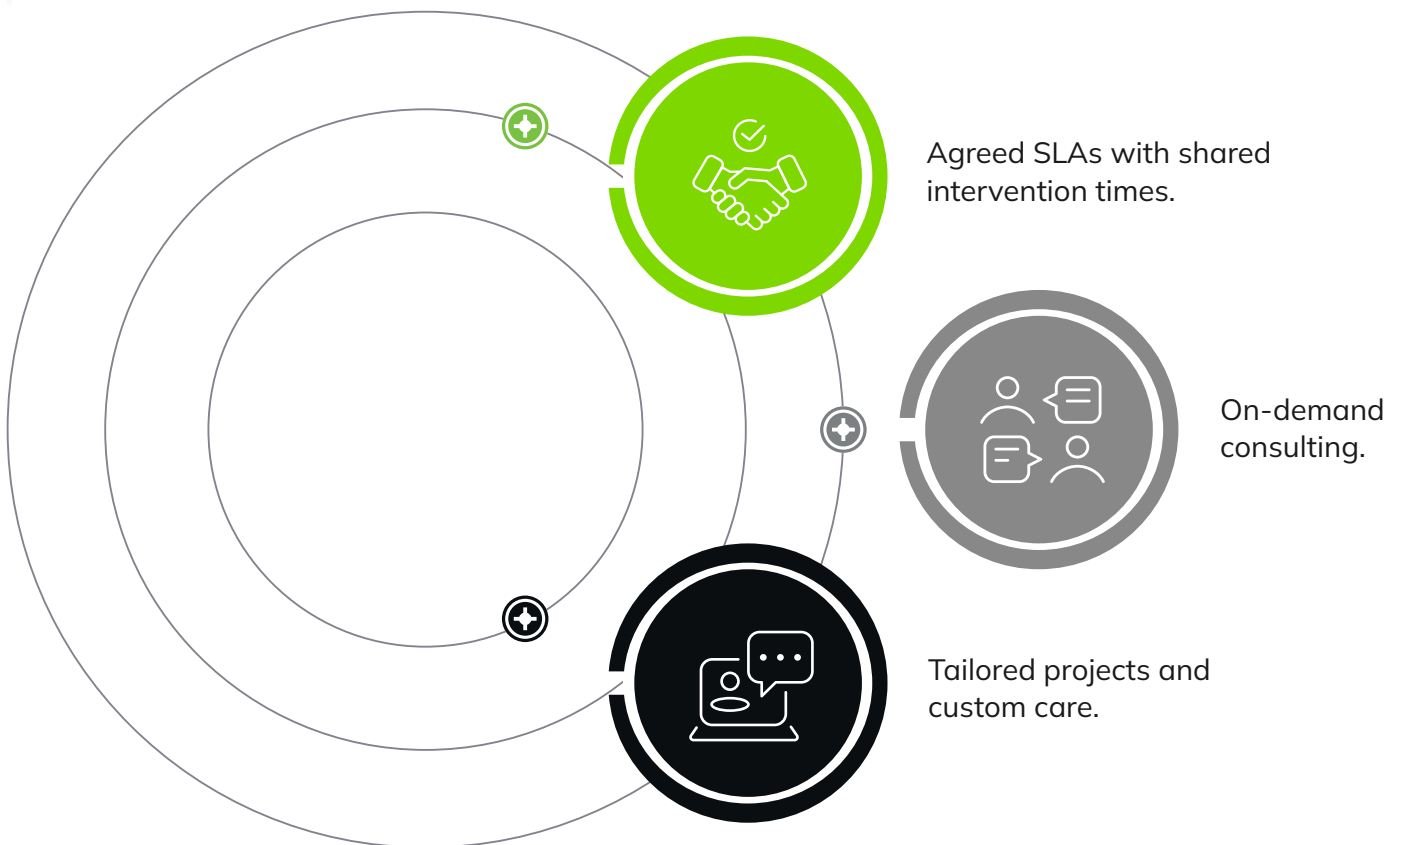

Computer Aided engineering software (CAx) represents a significant investment that can account for up to 70% of a company's IT budget.

Optimal management of software licenses through continuous monitoring, is therefore crucial for an effective utilization of these important software tools.

Effectively managing the portfolio of licenses through, as well as of the license servers helps prevent disruptions and bottlenecks, ultimately reducing time-to-market.

- Management of license servers for complex environments (installation, configuration, updates, maintenance).
- Installation and configuration of major commercial software vendors' licenses (FlexLM, LMX, DSLS, Sentinel, RLM, etc.).
- Migration and upgrade of complex licensing environments.
- Monitoring of license server processes and services using specific tools (Nagios, Zabbix, etc.).
- Monitoring of the usage of major CAE, CAD/PLM, CAT software in engineering environments (Dassault, Altair, Siemens, Mathworks, etc.).
- Installation, configuration, and optimization of major tools for license usage monitoring (Altair SAO, Observer, etc.).
- License inventory management with alerts for expiration.
- Centralized help desk support (L1, L2) with ticketing system.
- Customization of licensing environments based on customer needs (reservation, whitelist, blacklist).
- Reporting of any license denials and root cause analysis.
- Periodic reviews with the customer for data analysis and reporting.

Do IT Now ensures a 360° management that adapts to any scenario.

All of this is possible thanks to a dedicated team with years of experience in the industry and in-depth knowledge of methodologies applied in the enterprise context.
